Sai Pavan Kumar Kistamsetty

AI ENGINEER | FULL-STACK DEVELOPER | AI AGENT BUILDER

Telangana, India +91 80963 27356 saipavankistamsetty@gmail.com github.com/saipavan-python linkedin.com/in/sai-pavan-kistamsetty

SUMMARY

AI engineer and full-stack developer building LLM-powered applications, retrieval-augmented generation pipelines, multi-agent workflows, and production web products. Comfortable owning a problem from schema and API design through frontend, testing, and deployment. Recent work includes a multi-sided mobility marketplace, a credit-based book exchange MVP, and an evidence-verification library for AI research.

TECHNICAL SKILLS

AI & GenAI	LangChain, LangGraph, CrewAI, OpenAI API, Gemini API, RAG, prompt engineering, multi-agent orchestration, semantic search, structured outputs
Backend	Python, Flask, REST APIs, authentication, JWT, Prisma, Node.js / Express, Zod
Data	PostgreSQL, Supabase, MySQL, SQLite, SQL, ChromaDB
Frontend	React, Next.js, Angular 16, TypeScript, JavaScript, Tailwind CSS, Framer Motion
Infrastructure	Git, GitHub, Docker, Vercel, Google Cloud Run, Supabase, Postman

SELECTED PROJECTS

Near Wheels - AI-powered mobility marketplace

Private build

- Built a multi-sided marketplace spanning ride-sharing, vehicle rentals, garages, driving schools, drone spraying, farm services, and intercity buses.
- Implemented concurrency-safe booking with row locks, idempotent Razorpay payment verification, role-aware admin authorization, spoof-resistant rate limiting, and magic-byte image validation.
- Added a Gemini-powered trip planner and provider/admin dashboards; 73 API route handlers and 79 Vitest tests.

`Next.js | TypeScript | Prisma | PostgreSQL/Supabase | Tailwind CSS | Gemini | Razorpay | Vitest`

BookLoop India - Book exchange marketplace MVP

MVP | private

- Built a mobile-first peer-to-peer book exchange with Supabase Auth, PostgreSQL row-level security, a credit ledger, and atomic exchange transactions.
- Implemented catalogue filters, ISBN wish-list alerts, moderated reviews, dispute handling, admin moderation, and SEO metadata/sitemap generation.

`Next.js 16 | React 19 | TypeScript | Supabase | Tailwind CSS | Zod`

Open Competitor Lens - Evidence-backed AI research library

Public pre-alpha

- Designed a RAG and evidence-verification library where every report claim must trace back to a retrieved source.
- Built retrieval providers, SSRF protection, schema-constrained extraction, Chroma vector storage, BM25 retrieval, fact-checking, and quality gates.
- Test suite: 1,124 tests, including a 133-case AST layering check. Public pre-alpha.

`Python | Pydantic | SQLAlchemy | ChromaDB | OpenAI/Gemini | Tavily | Firecrawl | Playwright`

KANSBE - Live freelancing platform

Live product

- Contributed to the Angular 16 frontend serving freelancer, client, and admin portals.
- Implemented role-based routing and guards, JWT interceptors, API integration, responsive UI, and SEO metadata.

`Angular 16 | TypeScript | Angular Material | Bootstrap | Socket.IO | JWT`

SmartSchool Management System - Flask school platform

Public repo

- Role-based authentication, session management, unique-ID student dashboards, CRUD operations, and 100+ structured records.

`Python | Flask | SQL | HTML | CSS`

EDUCATION

B.Tech - Electrical Engineering
JNTU | CGPA 6.89

Diploma - Electrical Engineering
SBTET | 68%

ADDITIONAL

Public repositories: ATM Simulator, Temperature Converter, Smart Calculator, SmartSchool Management System. Open to AI engineering, full-stack, and graduate roles.
